Current Organization:

Some Thoughts
• Try to simplify organization to make it easier to find things and maintain
• Avoid links into sections of a document
• Less circular logic in linking. Create a clearer hierarchy of documents with better flow.
• Should we combine news and news archive?
• Move FAQ to cesm forums
• Manage links to external sites better so there are fewer links to maintain. For instance, create a document that links to cesm forum and have other documents point to the document vs have all documents point to cesm forums directly.
• Have sidebar links and document names agree better to reinforce a "single" name
• Group together documents and topics further.
• Organize Governance documents better both in terms of stuff that needs to be in each repo and stuff that can be centralized
• Decide what needs to be in each repo and on wikis and decide format, recommend .md to make things easier to change
    •License?
    •COC?
    • ?
• Identify and reduce if possible current copyright statements. Can we point and/or reuse? Can we have single format? Can we implment a tool that quickly updates all? Currently, they exist in
    •License in each repo
    • icepack/icepack_intfc.F90
    • icepack/icedrv_main.F90
    • icepack + cice doc conf.py
    • icepack + cice doc copyright.rst
    • cice every driver in either CICE.F90 or CICE_copyright.txt (inconsistent)
